Derivacije pogreške s obzirom na parametre mreže

Ukupna pogreška E je:

$$E = \frac{1}{2} \sum_{n=1}^N (o^{(n)} - t^{(n)})^2,$$

gdje je N broj pravila, $o^{(n)}$ dobiveni izlaz iz sustava, a $t^{(n)}$ očekivani izlaz iz sustava, za n -ti primjer.

n -ti izlaz $o^{(n)}$ je:

$$o^{(n)} = \sum_{m=1}^M \tilde{w}_m f_m(x^{(n)}, y^{(n)}; p_m, q_m, r_m),$$

gdje je \tilde{w}_m pripadna normalizirana težina, a f_m prijenosna funkcija s parametrima p_m , q_m , i r_m , m -tog pravila; $x^{(n)}$ i $y^{(n)}$ su vrijednosti n -tog primjera u ovom zadatku.

Prijenosna funkcija m -tog pravila f_m je, u ovom zadatku, linearna kombinacija vrijednosti $x^{(n)}$ i $y^{(n)}$ n -tog ulaza:

$$f_m(x^{(n)}, y^{(n)}; p_m, q_m, r_m) = p_m x^{(n)} + q_m y^{(n)} + r_m.$$

Normalizirana težina m -tog pravila \tilde{w}_m je:

$$\tilde{w}_m = \frac{w_m}{\sum_{k=1}^M w_k}.$$

Nenormalizirana težina m -tog pravila w_m jednaka je t -normi mjera pripadnosti n -tog ulaznog primjera paru neizrazitih skupova (A_m, B_m) . U ovom zadatku zadana t -norma je algebarski produkt (\cdot) , pa je nenormalizirana težina w_m :

$$w_m = \mu_{A_m}(x^{(n)}) \cdot \mu_{B_m}(y^{(n)}),$$

gdje je $\mu_{X_m}(x)$ mjera pripadnosti elementa x neizrazitom skupu X m -tog pravila.

Mjere pripadnosti $\mu_{X_m}(x)$ u ovom zadatku modelirane su parametriziranim sigmoidalnim funkcijama s parametrima a_{X_m} i b_{X_m} :

$$\mu_{X_m}(x; a_{X_m}, b_{X_m}) = \frac{1}{1 + e^{-b_{X_m}(x - a_{X_m})}}.$$

Za m -to pravilo postoji 7 parametara koje je potrebno trenirati na zadanom skupu podataka: $p_m, q_m, r_m, a_{A_m}, a_{B_m}, b_{A_m},$ i b_{B_m} . Ukupno je $7M$ parametara, gdje je M broj pravila.

Derivacija ukupne pogreške s obzirom na izlaz iz sustava $o^{(n)}$ za n -ti primjer je:

$$\frac{\partial E}{\partial o^{(n)}} = o^{(n)} - t^{(n)}.$$

Derivacija izlaza $o^{(n)}$ za n -ti primjer po prijenosnoj funkciji f_m m -tog pravila je:

$$\frac{\partial o^{(n)}}{\partial f_m} = \tilde{w}_m.$$

Derivacije prijenosne funkcije f_m m -tog pravila po parametrima $p_m, q_m,$ i r_m , za n -ti primjer, su:

$$\frac{\partial f_m}{\partial p_m} = x^{(n)}, \quad \frac{\partial f_m}{\partial q_m} = y^{(n)}, \quad \frac{\partial f_m}{\partial r_m} = 1.$$

Derivacije nenormalizirane težine w_m m -tog pravila po mjerama pripadnosti neizrazitim skupovima μ_{A_m} i μ_{B_m} , za n -ti primjer su:

$$\frac{\partial w_m}{\partial \mu_{A_m}} = \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m}), \quad \frac{\partial w_m}{\partial \mu_{B_m}} = \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m}),$$

a normalizirane težine \tilde{w}_m :

$$\frac{\partial \tilde{w}_m}{\partial \mu_{A_m}} = \frac{1}{\sum_{k=1}^M w_k} \cdot \frac{\partial w_m}{\partial \mu_{A_m}}, \quad \frac{\partial \tilde{w}_m}{\partial \mu_{B_m}} = \frac{1}{\sum_{k=1}^M w_k} \cdot \frac{\partial w_m}{\partial \mu_{B_m}}.$$

Derivacije mjere pripadnosti μ_{X_m} neizrazitom skupu X_m m -tog pravila po parametrima a_{X_m} i b_{X_m} su:

$$\begin{aligned} \frac{\partial \mu_{X_m}}{\partial a_{X_m}} &= \frac{-1}{(1 + e^{-b_{X_m}(x - a_{X_m})})^2} \cdot e^{-b_{X_m}(x - a_{X_m})} \cdot (-b) \\ &= -b \cdot \mu_{X_m}(x^{(n)}; a_{X_m}, b_{X_m}) \cdot (1 - \mu_{X_m}(x^{(n)}; a_{X_m}, b_{X_m})) \end{aligned}$$

$$\begin{aligned} \frac{\partial \mu_{X_m}}{\partial b_{X_m}} &= \frac{-1}{(1 + e^{-b_{X_m}(x - a_{X_m})})^2} \cdot e^{-b_{X_m}(x - a_{X_m})} \cdot -(x - a) \\ &= (x - a) \cdot \mu_{X_m}(x^{(n)}; a_{X_m}, b_{X_m}) \cdot (1 - \mu_{X_m}(x^{(n)}; a_{X_m}, b_{X_m})) \end{aligned}$$

Konačno, tražene derivacije ukupne pogreške s obzirom na sve parametre sustava za m -to pravilo i n -ti ulazni primjer su:

$$\frac{\partial E}{\partial p_m} = \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial f_m} \frac{\partial f_m}{\partial p_m} = (o^{(n)} - t^{(n)}) \cdot \tilde{w}_m \cdot x^{(n)},$$

$$\frac{\partial E}{\partial q_m} = \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial f_m} \frac{\partial f_m}{\partial q_m} = (o^{(n)} - t^{(n)}) \cdot \tilde{w}_m \cdot y^{(n)},$$

$$\frac{\partial E}{\partial r_m} = \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial f_m} \frac{\partial f_m}{\partial r_m} = (o^{(n)} - t^{(n)}) \cdot \tilde{w}_m,$$

$$\begin{aligned} \frac{\partial E}{\partial a_{A_m}} &= \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial w_m} \frac{\partial w_m}{\mu_{A_m}} \frac{\partial \mu_{A_m}}{\partial a_{A_m}}, \\ &= (o^{(n)} - t^{(n)}) \cdot \frac{1}{\sum_{k=1}^M w_k} \cdot \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m}) \\ &\quad \cdot (-b) \cdot \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m}) \cdot (1 - \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m})), \end{aligned}$$

$$\begin{aligned} \frac{\partial E}{\partial b_{A_m}} &= \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial w_m} \frac{\partial w_m}{\mu_{A_m}} \frac{\partial \mu_{A_m}}{\partial b_{A_m}}, \\ &= (o^{(n)} - t^{(n)}) \cdot \frac{1}{\sum_{k=1}^M w_k} \cdot \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m}) \\ &\quad \cdot (x - a) \cdot \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m}) \cdot (1 - \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m})), \end{aligned}$$

$$\begin{aligned} \frac{\partial E}{\partial a_{B_m}} &= \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial w_m} \frac{\partial w_m}{\mu_{B_m}} \frac{\partial \mu_{B_m}}{\partial a_{B_m}}, \\ &= (o^{(n)} - t^{(n)}) \cdot \frac{1}{\sum_{k=1}^M w_k} \cdot \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m}) \\ &\quad \cdot (-b) \cdot \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m}) \cdot (1 - \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m})), \end{aligned}$$

$$\begin{aligned} \frac{\partial E}{\partial b_{B_m}} &= \frac{\partial E}{\partial o^{(n)}} \frac{\partial o^{(n)}}{\partial w_m} \frac{\partial w_m}{\mu_{B_m}} \frac{\partial \mu_{B_m}}{\partial b_{B_m}}, \\ &= (o^{(n)} - t^{(n)}) \cdot \frac{1}{\sum_{k=1}^M w_k} \cdot \mu_{A_m}(x^{(n)}; a_{A_m}, b_{A_m}) \\ &\quad \cdot (x - a) \cdot \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m}) \cdot (1 - \mu_{B_m}(x^{(n)}; a_{B_m}, b_{B_m})). \end{aligned}$$
